1. Policy Statement

This policy applies to all research, teaching, testing, or production activities involving vertebrate animals conducted under the auspices of Rutgers, The State University of New Jersey at all University locations.

The policy provides the following assurances for all procedures using live vertebrate animals:

- Procedures involving animals should be conducted only when they will contribute to the advancement of knowledge that is likely to lead to improvement of the health and welfare of animals or human beings, provide a better understanding of the animals themselves, or for the good of society.
- Animals involved in any research, teaching, testing, or production procedures receive humane care and treatment.
- Animal research is conducted in a well-controlled research environment.
- Concerns regarding the care and use of animals at the University are addressed in a professional and responsible manner.
- Research involving the use of live animals is performed in an ethical manner designed to minimize pain and distress and comply with applicable regulations.
2. **Reason for Policy**

   This policy allows the University to fulfill its ethical obligations to the community at large and its legal obligations to regulatory agencies. It is not intended to limit the freedom of faculty, staff, or students, but rather to assist in conducting research and training of the highest quality while adhering to the highest professional standards of their disciplines and regulatory authorities.

3. **Who Should Read This Policy**

   Faculty, staff, and students who use live vertebrate animals for research, teaching, testing, or production purposes are required to conform to this policy. They should also be familiar with administrative procedures adopted by the University to ensure compliance with the principles of humane animal care and use, and with pertinent laws and regulations.

   To ensure compliance, faculty, staff, and students utilizing live vertebrate animals are required to obtain the approval of their respective Institutional Animal Care and Use Committee (IACUC) prior to such utilization. They are further required to comply with such conditions as may be made by the Committee.

4. **Resources**

   Additionally, the University shall adhere to [The National Research Council's Guide for the Care and Use of Laboratory Animals](https://www.nap.edu/catalog/10228/the-national-research-councils-guide-for-the-care-and-use-of-laboratory-animals) (most current edition) and to the [Public Health Service Policy on Humane Care and Use of Laboratory Animals](https://www.nap.edu/catalog/10228/the-national-research-councils-guide-for-the-care-and-use-of-laboratory-animals).

   Where agricultural animals are used for research, teaching, testing, or production purposes, the University shall adhere to the most recent edition of [Guide for the Care and Use of Agricultural Animals in Research and Teaching](https://www.ndsu.edu/faculty/staff/ah/sheep/), published by the American Dairy Science Association, the American Society of Animal Science, and the Poultry Science Association.

   The University will adhere to the [American Veterinary Medical Association’s Guidelines for the Euthanasia of Animals](https://www.avma.org/KB/Policies/guidelines-for-euthanasia/) for methods of euthanasia of research animals (most current edition).

5. **Definitions**

   **The Guide**: Refers to the National Research Council's Guide for the Care and Use of Laboratory Animals

   **PHS policy**: Public Health Service Policy on the Humane Care and Use of Laboratory Animals

   **Animal Welfare Act**: Refers to the [Animal Welfare Act](https://www.aphis.usda.gov/animal_welfare) administered by the United States Department of Agriculture Animal and Plant Health Inspection Service (USDA APHIS)

   **Attending Veterinarian**: The role of the Attending Veterinarian (AV) is defined in the [National Research Council’s Guide for the Care and Use of Laboratory Animals](https://www.nap.edu/catalog/10228/the-national-research-councils-guide-for-the-care-and-use-of-laboratory-animals) as the “veterinarian responsible for the health and well-being of all laboratory animals used at the institution”

IACUC: Institutional Animal Care and Use Committee

6. The Policy

A. Introduction

Through its use of animals in research, teaching, testing, or production purposes, Rutgers University incurs certain ethical and legal responsibilities for the humane care and use of those animals. These ethical responsibilities require that faculty, staff, and students use care, wisdom, and humane considerations when deciding on the need for animals, the choice of species, and the number of animals, for research, teaching, testing, or production purposes. In order to promote the humane care and use of animals, the University Institutional Animal Care and Use Committees (IACUCs) are charged with the responsibility for ensuring adherence to appropriate University and Federal policies and regulations, and State and local laws. The University contends that well-conducted research with animals has provided, and continues to provide, information, ideas, and applications that can be obtained in no other way. Medical research produces clear benefits for human health care: Medical advances have contributed substantially to decreased infant mortality and increased life expectancy. In addition, medical and related research also contributes to the quality and length of life for many animals such as pets, zoo animals, and wildlife, including endangered species.

Before any work with animals commences, all procedures using live vertebrate animals, whether new, on-going, or proposed for funding, and irrespective of the source or presence of funding, must be reviewed and approved by a Rutgers University IACUC. This shall include use of animals for research, teaching, testing, or production purposes (with the exception of non-University animals utilized for demonstration purposes by Rutgers Cooperative Extension). In some circumstances, the work may be reviewed and approved by another institution’s IACUC. Any sub-awards that are given to Rutgers faculty for animal studies will need Rutgers IACUC approval and oversight. IACUCs are permitted to make determinations of whether a protocol is required for an activity not clearly involving animal research, testing, or teaching.

B. Principles Regarding the Use of Animals

The University embraces the United States Government Principles for the Utilization and Care of Vertebrate Animals Used in Testing, Research, and Training. These include:

I. The transportation, care, and use of animals should be in accordance with the Animal Welfare Act (7 U.S.C. 2131 et seq.) and other applicable Federal laws, guidelines, and policies.

II. Procedures involving animals should be designed and performed with due consideration of their relevance to human or animal health, the advancement of knowledge, or the good of society.

III. The animals selected for a procedure should be of an appropriate species and quality and the minimum number required to obtain valid results. (The use of statistical models and proper experimental design can help determine the numbers of subjects needed to produce required statistical power. Following such good scientific practice might actually increase the total number of animals used in a project.) Non-animal methods such as
mathematical models, computer simulation, and in vitro biological systems should be considered.

IV. Proper use of animals, including the avoidance or minimizing of discomfort, distress, and pain when consistent with sound scientific practices, is imperative. Unless the contrary is established, investigators should consider that procedures that cause pain or distress in human beings may cause pain or distress in other animals.

V. Procedures with animals that may cause more than momentary or slight pain or distress should be performed with appropriate sedation, analgesia, or anesthesia. Surgical or other painful procedures should not be performed on unanesthetized animals paralyzed by chemical agents.

VI. Animals that would otherwise suffer severe or chronic pain or distress that cannot be relieved should be painlessly killed at the end of the procedure or, if appropriate, during the procedure.

VII. The living conditions of animals should be appropriate for their species and contribute to their health and comfort. Normally, the housing, feeding, and care of all animals used for biomedical purposes must be directed by a veterinarian or other scientist trained and experienced in the proper care, handling, and use of the species being maintained or studied. In any case, veterinary care shall be provided as indicated.

VIII. Investigators and other personnel shall be appropriately qualified and experienced for conducting procedures on living animals. Adequate arrangements shall be made for their in-service training, including the proper and humane care and use of laboratory animals.

IX. Where exceptions are required in relation to the provisions of these Principles, the decisions should not rest with the investigators directly concerned but should be made, with due regard to Principle II, by an IACUC. Such exceptions should not be made solely for the purposes of teaching or demonstration.

C. Mechanisms for Compliance

To ensure consistent policies and procedures across the University, an IACUC Advisory Committee has been established to draft, revise, review, and approve animal care and use policies, guidelines, and Standard Operating Procedures (SOP). Advisory Committee membership may include representatives from administration (the Institutional Official (IO) and/or Research Compliance leadership), the veterinary staff (the Attending Veterinarian or designees), IACUC staff (administrators, IACUC chairs, IACUC members), along with ad hoc members as determined by the Advisory Committee.

The IACUCs\(^1\) shall be appointed by, and be responsible to, the Executive Office of the President, for monitoring compliance with this policy and with the requirements of applicable laws and regulations. The President may delegate to the IO, in writing, the authority to appoint IACUC

---

\(^1\) In accordance with Federal guidelines, the Institutional Animal Care and Use Committees (IACUC) shall consist of not less than five members, and shall include: a chairperson; a member who holds a Doctor of Veterinary Medicine (D.V.M.) or equivalent degree, with training or experience in laboratory animal science and medicine, who has direct or delegated program responsibility for activities involving animals at the University; a practicing scientist experienced in research involving animals; a member whose primary concerns are in a nonscientific area (for example, an ethicist, lawyer, or member of the clergy); and a member who is neither affiliated with the institution in any way other than as a member of the IACUC nor a member of the immediate family of a person who is affiliated with the University.

All policies are subject to amendment. Please refer to the Rutgers University Policy Library website (policies.rutgers.edu) for the official, most recent version.

members. Each time a new President or IO takes office, a new letter shall be written. The
IACUC Committees are authorized to:

1. Review at least every six months the University's program for humane care and use of
   animals, using the Guide as a basis for evaluation;
2. Inspect at least every six months all of the University's animal facilities, including satellite
   facilities, using the Guide as a basis for evaluation;
3. Prepare reports of IACUCs' evaluations and submit the reports to the IO;
4. Review concerns involving the care and use of animals at the University;
5. Make recommendations to the IO regarding any aspect of the University's animal care
   program, facilities, or personnel training; and
6. Review and approve, require modifications in (to secure approval), or withhold approval
   of those sections of proposed research or instructional protocols related to the care and
   use of animals according to the following Public Health Service Policy requirements, and
   consistent with the United States Government Principles:

   Implementation of the United States Government Principles:

   a. Procedures with animals will avoid or minimize discomfort, distress, and pain to
      the animals, consistent with solid research design.

   b. Procedures that may cause more than momentary or slight pain or distress to the
      animals will be performed with appropriate sedation, analgesia, or anesthesia,
      unless the procedure is justified for scientific reasons in writing by the
      investigator.

   c. Animals that would otherwise experience severe or chronic pain or distress that
      cannot be relieved will be painlessly sacrificed at the end of the procedure or, if
      appropriate, during the procedure.

   d. The living conditions of animals will be appropriate for their species and
      contribute to their health and comfort. The housing, feeding, and non-medical
      care of the animals will be directed by a veterinarian or other scientist trained and
      experienced in the proper care, handling, and use of the species being
      maintained or studied.

   e. Medical care for animals will be available and provided as necessary by a
      qualified veterinarian.

   f. Personnel conducting procedures on the species being maintained or studied will
      be appropriately qualified and trained in those procedures.

   g. Methods of euthanasia used will be consistent with the recommendations of the
      most recent edition of the American Veterinary Medical Association's euthanasia
      guidelines unless a deviation is justified for scientific reasons in writing by the
      investigator.

7. Review and approve, require modifications in (to secure approval), or withhold approval
   of proposed significant changes regarding the use of animals in ongoing activities.
8. Suspend any activity involving animals if it determines that it is not conducted in
   accordance with the specifications set forth in the Animal Welfare Act, the Guide, or the
   Rutgers University Animal Welfare Assurance filed with the National Institute of Health's
   Office of Laboratory Animal Welfare. A suspension may occur only after review of the
matter at a convened meeting of a quorum of the responsible IACUC, and with the suspension vote of a majority of the quorum present.

9. The Attending Veterinarian or designee has the authority to stop any animal study that is not being conducted in compliance with the regulations or this policy, or is not described in an approved IACUC protocol, until such time as an IACUC investigation can be conducted as set out in 6.C.8.
